

BUSINESS INTELLIGENCE REPORT · 01

Admin & Revenue Dashboard

Operational, Enrollment, and Financial Performance Overview

REPORTING PERIOD	1 September 2025 – 22 April 2026
PREPARED FOR	Leadership & Operations Stakeholders
PREPARED BY	Analytics & Reporting Team

About this report

This document translates the live Power BI dashboard into a narrative briefing for stakeholders who need the headline numbers, the story behind them, and a clear set of next steps — without opening the dashboard itself.

1. Executive Summary

This report summarizes the performance of the Admin Dashboard built in Power BI, which consolidates enrollment, revenue, fee collection, and lead-conversion data across all boards, classes, and fee statuses for the period 1 September 2025 to 22 April 2026. The dashboard was designed to give leadership a single, real-time view of where revenue is being realized, where it is at risk, and where operational leakage — such as ghost students and lost leads — is impacting growth.

Over the reporting period, the institute enrolled 50 students and collected ₹72,000 in revenue, against ₹1,51,250 still outstanding or at risk — meaning that for every rupee collected, roughly two rupees remain uncollected or exposed. The overall lead-to-admission conversion rate stands at 27.50%, while demo-to-admission conversion is markedly healthier at 40%. Read together, these figures tell a clear story: the front end of the funnel (getting prospects into a demo class) is working, but two things are leaking value downstream — fee collection discipline, and the conversion of demo attendees into long-term, paying students.

The remainder of this report walks through each area of the dashboard in detail: the revenue and fee-status picture, the enrollment funnel, ghost-student and lost-lead risk, board-wise profitability, and payroll exposure — closing with a prioritized set of recommendations.

2. Key Performance Indicators

The table below reflects the headline metrics surfaced on the dashboard's summary cards, each filterable by board, class, fee status, and date range.

₹72K Revenue Collected	₹1.51L Revenue At Risk	50 Total Enrolled Students
27.50% Lead Conversion Rate	40% Demo Conversion Rate	21 Ghost Students
29 Lost Leads	₹7.18L Payroll Pending	

How to read this scorecard

Revenue Collected and Revenue At Risk should always be viewed together rather than in isolation — the ratio between them (roughly 1:2 in this period) is the single best one-line

summary of billing health that leadership can quote in a meeting. Conversion rates should be read as a funnel pair: the gap between Demo Conversion (40%) and overall Lead Conversion (27.50%) is the clearest evidence of where the funnel is losing prospects.

3. Revenue Performance

Revenue is tracked by fee_status (Paid, Pending, Partially Paid, Overdue, Waived) and visualized against Avg Revenue Per Student across boards and individual students. This view allows finance and operations teams to identify which boards and which specific students are driving revenue concentration, and where collection follow-up should be prioritized.

3.1 Revenue by Fee Status

Each fee status carries a distinct operational meaning and a different recommended response. The breakdown below is drawn directly from the dashboard's 'Revenue by Status' visual.

Fee Status	What It Means	Recommended Action
Paid	Recognized revenue; forms the ₹72K collected base.	No action — use as the collection benchmark.
Pending	Largest contributor to the ₹1.51L at-risk figure.	Active follow-up call/SMS within 7 days of due date.
Partially Paid	Installment plan in progress.	Monitor for stalling; auto-reminder before next installment.
Overdue	Highest-priority recovery segment.	Escalate to counselor / finance within 48 hours.
Waived	Fee concession granted by policy or exception.	Quarterly audit against waiver approval policy.

3.2 Revenue by Board

Average Revenue Per Student is compared across ICSE, State Board, CBSE, and Entrance (competitive exam) categories. This comparison helps leadership understand which board segments are the most financially valuable per enrolled student, informing where marketing and counseling effort should be concentrated for the strongest return on acquisition spend.

- Entrance and ICSE segments typically command a higher per-student average due to intensive, higher-hour-rate subject combinations.
- CBSE and State Board segments carry higher volume but a lower average ticket size, making them important for top-line scale rather than margin.

We recommend reviewing this split quarterly alongside the marketing budget allocation, so that spend follows demonstrated revenue-per-student value rather than lead volume alone.

3.3 Revenue by Student

The 'Avg Revenue Per Student' visual, sorted by individual student, surfaces a small number of high-value accounts (led by Bhavya, Vedant, Isha, and Yash) that disproportionately contribute to total revenue. Concentration of revenue in a small student base is common in early-stage cohorts, but it does increase sensitivity to any single account's attrition or non-payment — a useful input for retention prioritization.

4. Funnel & Enrollment Health

The 27.50% overall conversion rate, combined with a 40% demo conversion rate, indicates that prospective students who attend a demo class convert at a notably higher rate than the broader lead pool. This gap highlights a structural opportunity: increasing demo attendance — through faster scheduling, reminders, or counselor follow-up — should directly lift overall conversion, because the demo stage is already proving itself to be the more effective half of the funnel.

4.1 Funnel Stage Breakdown

Funnel Stage	Observed Rate	Interpretation
Enquiry → Demo Scheduled	Tracked via student_enquiry status	Gateway stage; speed of response matters most here.
Demo → Admission	40%	Strong; demo experience is converting effectively.
Enquiry → Admission (overall)	27.50%	Weaker than demo-stage rate; signals enquiry-to-demo drop-off.

4.2 Ghost Students & Lost Leads

Insight: Ghost Students & Lost Leads

21 ghost students (enrolled but with no recent class activity) and 29 lost leads were identified in this period. Together these represent both retention risk on the existing base and unrealized acquisition opportunity. We recommend a monthly ghost-student outreach cadence and a lost-lead win-back campaign tied to the CRM, with a named owner and a follow-up deadline for each list.

Ghost students are particularly important to flag early: they still count toward enrollment totals and may still owe fees, but contribute no class activity and therefore no ongoing demonstrable value or renewal likelihood. Left unaddressed, this segment quietly inflates enrollment counts while suppressing both attendance and revenue metrics.

5. Payroll & Cost Visibility

Payroll Pending of ₹7,18,400 is tracked alongside revenue so that leadership can view collection and payout obligations side by side rather than in separate systems. Maintaining a healthy buffer between revenue collected and payroll pending is critical to cash-flow planning, particularly during periods of seasonal admission slowdown (for example, between academic terms or around major board exam windows).

At the current snapshot, Payroll Pending (₹7.18L) exceeds Revenue Collected (₹72K) by a wide margin within this filtered view. While payroll obligations typically accrue and settle on a different cycle than student billing, this gap is worth a standing finance review to confirm it reflects timing rather than a structural shortfall.

6. Risk Summary

Consolidating the signals above, three risk areas stand out as needing active management rather than passive monitoring:

1. Collections risk — ₹1.51L in Pending, Partially Paid, and Overdue fees combined, more than double the amount already collected.
2. Funnel leakage — a 12.5 percentage-point gap between demo conversion (40%) and overall conversion (27.50%), concentrated at the enquiry-to-demo step.
3. Retention exposure — 21 ghost students and 29 lost leads representing quiet attrition on both the existing base and the acquisition pipeline.

7. Recommendations

- Prioritize collection outreach on Overdue and Pending fee segments, which together make up the bulk of the ₹1.51L revenue at risk; set a 7-day SLA for first follow-up contact.
- Increase demo-class scheduling speed and reminders to convert more of the funnel into the higher-performing 40% demo-conversion pathway.

- Establish a recurring (monthly) ghost-student and lost-lead review, owned jointly by operations and counseling teams, with a documented win-back script.
- Track Avg Revenue Per Student by board on a monthly basis to guide marketing spend toward the highest-value segments (Entrance and ICSE).
- Align payroll disbursement cycles with collection cycles to protect short-term cash flow, and add a payroll-vs-revenue variance check to the monthly finance review.
- Introduce a waiver-approval audit on a quarterly basis to ensure fee concessions remain policy-compliant as enrollment scales.

8. Conclusion

The Admin Dashboard provides leadership with a consolidated, filterable view of revenue, enrollment, and funnel health, replacing what was previously scattered across multiple spreadsheets and manual reports. With the recommendations above, this dashboard can move from a reporting tool to an active driver of revenue recovery and funnel optimization. We suggest revisiting this report on a monthly cadence so that trend direction — not just point-in-time values — becomes part of the standing leadership conversation.

Appendix: Glossary of Terms

Term	Definition
Revenue At Risk	Sum of fees not yet fully collected, spanning Pending, Partially Paid, and Overdue statuses.
Ghost Student	An enrolled student with no recent recorded class or attendance activity.
Lost Lead	An enquiry that did not progress to a scheduled demo or admission and is no longer active.
Demo Conversion Rate	Share of students who attended a demo class and went on to take a paid admission.
Conversion Rate (overall)	Share of all enquiries that resulted in a paid admission, regardless of demo attendance.
