Student Engagement Dashboard

Admissions, Attendance, and Academic Activity Overview

REPORTING PERIOD	1 September 2025 – 22 April 2026
PREPARED FOR	Academic & Student Success Stakeholders
PREPARED BY	Analytics & Reporting Team

About this report

This document translates the live Power BI dashboard into a narrative briefing for stakeholders who need the headline numbers, the story behind them, and a clear set of next steps — without opening the dashboard itself.

1. Executive Summary

This report covers the Student Dashboard built in Power BI, which tracks total students, admissions, attendance, class completion, and fee status at the individual student level for the period 1 September 2025 to 22 April 2026. It is designed to give academic and student-success teams visibility into engagement health beyond raw enrollment counts, surfacing which students and subjects need attention before they show up as churn or unpaid fees.

Of 60 total students on record, 50 were active admissions in this period, with an overall student attendance rate of 70% and a fee collection rate of 30%. 126 classes were completed in total, while 21 students were flagged as 'ghost students' — enrolled but showing minimal to no recent class activity, a key early-warning signal for churn. Together, the 70% attendance rate and the 30% fee collection rate suggest that engagement is comfortably ahead of billing — a pattern worth closing, since students who are attending but not paying are a near-term cash-flow risk rather than a retention risk.

2. Key Performance Indicators

The metrics below reflect the dashboard's summary cards, each filterable by board, class, fee status, and class date range.

60 Total Students	50 Total Admissions	70% Student Attendance Rate
21 Ghost Students	126 Total Completed Classes	30% Fee Collection Rate

How to read this scorecard

The most informative pairing here is Attendance Rate (70%) against Fee Collection Rate (30%): a wide gap between the two means engagement is not the bottleneck — billing follow-through is. Ghost Students (21) should be checked against the Total Students figure (60) regularly, since a rising ghost-student share is usually the earliest visible sign of attrition, well before a formal withdrawal is recorded.

3. Attendance & Subject Engagement

Student attendance percentage varies meaningfully by subject. Science and Sociology show the strongest attendance, while Accounts and BST trend lower. This pattern is consistent with class-

level engagement data and suggests subject-specific factors — such as scheduling, perceived difficulty, or teacher pairing — may be influencing turnout.

3.1 Attendance Tiers by Subject

Tier	Subjects	Likely Driver	Suggested Response
Strong (85%+)	Science, Sociology	Engaging format, manageable workload	Maintain; use as best-practice benchmark.
Moderate (70–85%)	Chemistry, English, Mathematics	Standard board-prep pacing	Routine monitoring.
Weaker (<70%)	Accounts, BST	Possible scheduling or difficulty mismatch	Teacher check-in and student survey.

Insight: Attendance Variability by Subject

The swing between the lowest and highest attendance subjects is substantial. Subjects with consistently lower attendance are good candidates for a structured check-in with both the assigned teacher and the affected students to understand the underlying cause — whether it is timing, pacing, or teaching style.

4. Class Completion & Curriculum Demand

Completed classes are concentrated in Mathematics, English, and Economics, which together account for the largest share of total delivered sessions. Competitive-exam tracks (SAT, NEET, JEE) and senior classes (Class 12, Class 11) show meaningfully higher total class volume than junior classes, reflecting the additional academic intensity typically required ahead of board and entrance examinations.

4.1 Class Volume by Grade Band

Grade Band	Relative Class Volume	Notes
Class 12 / Class 11	Highest	Board-exam and entrance prep intensity.
Class 10 / Class 9	Moderate-High	Foundational board-prep year.
Class 8	Moderate	Foundation building; lower intensity.

SAT / NEET / JEE	Lower volume, high specificity	Niche but high-stakes cohort; track separately.
------------------	--------------------------------	---

4.2 Sample Class Activity by Student

The dashboard's detail table logs every class by student, subject, class type, and teacher. A sample is shown below; the live dashboard table is fully filterable.

Student	Subject	Class Type	Teacher
Aanchal Mittal	Accounts	Regular	Rajat Bhardwaj
Aanchal Mittal	Mathematics	Regular	Srishti Kaushik
Aditi Pandey	Biology	Doubt Session	Siddharth Malik
Aditi Pandey	Mathematics	Demo	Abhishek Routela / Swati Choudhary
Aditya Singh	Economics	Doubt Session	Mihir Gulati

Class types span Regular, Demo, Doubt Session, and Mock Test categories. Tracking the mix of class types per student — not just the count — helps distinguish students who are on a steady regular schedule from those still in the demo or trial phase.

5. Fee Status at the Student Level

With a 30% fee collection rate against the broader student base, a significant share of students fall under Pending or Waived status. The student-level fee table allows counselors to follow up individually rather than relying on aggregate billing reports, which is especially useful for catching at-risk accounts before they lapse into Overdue.

5.1 Fee Status Snapshot (Sample)

Fee Status	Sample Students
Waived	Aanchal Mittal, Kunal Jain, Ritvik Sood
Pending	Ayush Pandey, Deepanshu Yadav, Devansh Arora, Harshit Saxena, Krish Iyer
Pending	Mehak Chawla, Parth Bhatia, Shalini Saxena, Simran Khanna, Sonam Chauhan, Sonia Bhalla

Waived and Pending together make up a large share of the visible student list, reinforcing the earlier point that attendance is outpacing billing. We recommend cross-referencing this list against the ghost-student flag, since a student who is both Pending on fees and flagged as a ghost student is the highest-priority case for proactive outreach.

6. Recommendations

- Launch a targeted re-engagement outreach for the 21 identified ghost students before they are formally lost as attrition, prioritizing any who are also fee-Pending.
- Investigate lower-attendance subjects (Accounts, BST) with subject teachers to identify and resolve scheduling or pedagogy issues.
- Tie fee-collection follow-up directly to the student-level Pending list shown on this dashboard to reduce manual cross-referencing with finance.
- Monitor class completion volume for SAT, NEET, and JEE tracks closely given their disproportionate share of total sessions and exam-readiness stakes.
- Set a recurring (bi-weekly) review of this dashboard between academic coordinators and student-success counselors, with the attendance-tier table as a standing agenda item.
- Periodically audit Waived fee statuses jointly with the Admin Dashboard's waiver policy review to ensure consistency across both views.

7. Conclusion

The Student Dashboard shifts the institute from reactive, end-of-term reporting to proactive, ongoing visibility into attendance, engagement, and billing health at the individual student level. Acting on the ghost-student and low-attendance signals identified here is the most direct lever for improving both retention and revenue collection, and pairs naturally with the collection and funnel recommendations in the Admin Dashboard report.

Appendix: Glossary of Terms

Term	Definition
Ghost Student	An enrolled student with no recent recorded class or attendance activity.
Student Attendance Rate	Share of scheduled classes a student actually attended, within the selected filter range.

Fee Collection Rate	Share of total billed fees that have been fully collected to date.
Class Type	Category of a scheduled class: Regular, Demo, Doubt Session, or Mock Test.
